

## IEEE Position Statement

# Universal Access to the Internet

*Approved by the  
IEEE Board of Directors  
(19 June 2016)*

*Renewed by the  
IEEE Board of Directors  
(18 November 2018)*

*Revised and renewed by the  
IEEE Board of Directors  
(21 November 2021)*

IEEE endorses the goal of universal access to the internet and supports national initiatives and international collaborations designed to expand access to the billions of people in both developed and developing countries around the world who do not have access to the internet.<sup>1</sup>

The internet today is an essential tool in providing and protecting the fundamental economic, social, cultural, civil, and political human rights set forth in the United Nations Universal Declaration of Human Rights and other international agreements and treaties.

Universal access to the internet will also contribute to the achievement of the United Nations Sustainable Development Goals.<sup>2</sup> Indeed, it would be very difficult to achieve many of them without use of the internet. World citizens increasingly rely on the internet for access to education, health care, employment, commerce and information, and the Internet of Things has the potential to dramatically increase the positive social and economic impacts of global connectivity.

The challenge of connecting billions of people who do not have internet access will require national, regional, and international efforts involving a broad array of public and private organizations engaged in open and transparent collaboration, coordination, and innovation.

Through its global reach and capabilities, IEEE has an important role to play in advancing solutions to the global internet access challenge. Promoting universal internet access is inherent in IEEE's mission of fostering technology innovation and excellence for the benefit of humanity.

To this end, IEEE calls upon the world-wide community of engineers, scientists, industry leaders, policy experts and others to apply their knowledge and skills to address the challenge of universal access to the internet, and the associated issues of affordability, reliability, security, safety, trust, privacy, governance, participation, fairness, and prosperity.

## **ABOUT IEEE**

IEEE is the world's largest technical professional organization dedicated to advancing technology for the benefit of humanity. Through its highly cited publications, conferences, technology standards, and professional and educational activities, IEEE is the trusted voice in a wide variety of areas ranging from aerospace systems, computers, and telecommunications to biomedical engineering, electric power, and consumer electronics.

---

<sup>1</sup> According to Internet World Stats, in March 2021 there were 5.1 billion active internet users worldwide (accessed 27 August 2021). See <https://www.internetworldstats.com/stats.htm>.

According to the International Telecommunications Union *Measuring Digital Development: Facts and Figures* report, globally, about 72 per cent of households in urban areas had access to the internet at home in 2019, almost twice as much as in rural areas (nearly 38 per cent). The urban-rural gap was small in developed countries, but in developing countries urban access to the internet was 2.3 times as high as rural access. See <https://www.itu.int/en/ITU-D/Statistics/Pages/facts/default.aspx>.
